~~SECRET~~/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

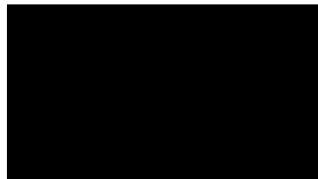

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8728 SESSION NUMBER: 2
DATE OF SESSION: 16 DEC 87 DATE OF REPORT: 17 DEC 87
START: 1448 END: 1512
METHODOLOGY: CRV VIEWER IDENTIFIER: 003

1. (S/NF/SK) MISSION: See original tasking data sheet, attached.
2. (S/NF/SK) VIEWER TASKING: As the monitor began to carefully explain the session tasking, 003 became impatient and jumped the gun-- actually taking off only half-cocked, so to speak--so that the session began prematurely.
3. (S/NF/SK) COMMENTS: Although I'm certain that valid, target related data is present, I would have a difficult time separating it out from the AOL which is almost certainly rampant in this session. "A stitch in time saves nine".

SGFOIA3

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

CLASSIFIED BY: DIA-DT

The original location dealing with the information important to the site is a warm, green, brown, sunny location that gives the impression of being there in the summertime. The surroundings are rural or country in setting, away from major population centers. It is a place not for people to live but to carry out activities that people would get in the way of. People are here because it is their job, and they wouldn't be here if they didn't need to be. There is some sort of structure and facility here. It's "like" the structure is in the middle of a meadow or grassy area. There is vegetation in the vicinity. The structure seems to be a low cement oblong shape out in the middle of a quadrangular, flat area of cement. There is an impression of people in uniforms "like" garrison-associated work fatigues. (AOL of a US Air Force EM doing his assigned job routinely) Whatever is done here involves technical expertise and considerable technical training to do all the things necessary to successfully accomplish the purpose. It has to do with electronics, monitors, controlling, and involves something hazardous, and requires a secure, isolated location. There seems some sort of emanative or radiative phenomenon associated with some sort of equipment employed here. There is a sense of some sort of field, as well as a warm, itchy, oscillating, humming, vibrating sensation. An artifact associated with this is white, clean, smooth, glassy, cold, hard, curving, dense, with a sense of "ceramic", which is about two feet by one foot in size, probably roughly cylindrical, with elements inside that are moving, perhaps turning or spinning. There is a sense that the emanations involved are "like" "waste"---secondary, though with proper engineering some sort of "beneficial" application could be made of them. There is a great deal of energy involved, along with the idea of some sort of generation. However, the "ceramic" part can't do what it does by itself. It is in effect a component of or connected to something, integral with it. It doesn't seem to be a weapon, but involves important technology---perhaps techniques and applications for developing components of something (AOL of a sophisticated piece of ADP equipment)(AOL of superconductors). There is some sort of impression that it might be used or become operational the first part of January.
